

Future climate data

[Historical climate data](#)[Historical monthly weather data](#)[Future climate data](#)

The data available here are [CMIP6](#) downscaled future climate projections. The [downscaling](#) and calibration (bias correction) was done with WorldClim v2.1 as baseline climate.

Monthly values of minimum temperature, maximum temperature, and precipitation were processed for 23 global climate models (GCMs), and for four [Shared Socio-economic Pathways](#) (SSPs): 126, 245, 370 and 585.

The monthly values were averages over 20 year periods (2021-2040, 241-2060, 2061-2080, 2081-2100). The following spatial resolutions are available (expressed as minutes of a degree of longitude and latitude): [10 minutes](#), [5 minutes](#), [2.5 minutes](#), and [30 seconds](#).

You can look at maps of the climate anomalies [here](#).

CMIP6 [terms of use and citation information](#).

The now obsolete downscaled CMIP5 data is still available [here](#).
